

INTEGRATED INFRASTRUCTURE PLANNING AND MANAGEMENT

CONNECT: SMART EXECUTIVE DEVELOPMENT

INTUITIVE MANAGEMENT – THE ANTIDOTE TO COMPLEXITY

Innovation and change gather pace yielding greater intensity in our working environment. Recognizing when our normal approach has to be complemented as a result of this constantly growing complexity is not easy.

Accepting that we are increasingly called on to deploy intuitive based solutions in our modern world, this workshop will explore how to nurture and build on the strengths of intuitive decision making.

Intuitive management is readily and often deployed; understanding its vulnerabilities is crucial in today's fast-moving world.

Date

Wednesday July 9, 2014

Venue

The Eora Room, Level 47,
MLC Centre, Martin Place, Sydney

This Workshop will

- Equip attendees with methodologies and tools to gauge and manage complexity
- Examine how the pervasive nature of complexity should be considered and how coping measures can be constructed
- Give examples and review the success factors for risk systems
- Illustrate the interactions between systems, risk and complexity
- Equip attendees with a system of systems understanding and provide the latest tools in systems thinking

On completion, attendees will

- Be equipped to recognise the properties of complex situations
- Be equipped with tools for classifying and dealing with the various forms of complexity
- Understand how risk approaches can support complex decision making
- Differentiate success and failure characteristics of risk systems and what to look for in risk governance
